

Colocation Northwest provides a single source solution for the best colocation and data center infrastructure, connectivity, and scalability in the Pacific Northwest of the United States. We offer highly customizable enterprise and wholesale data center and connectivity solutions to prominent businesses across the west coast who demand the best worldwide solutions for interconnectivity and reliability.

Colocation Northwest is a division of IsoFusion Inc., the largest independent colocation and internet services provider in Western Washington. Founded in 1991 as ISOMEDIA, IsoFusion is a full solution provider of Internet related services and complex solutions to companies with an international presence. As a competitive local exchange carrier (CLEC) in the state of Washington, IsoFusion offers a full range of services providing everything from managed data center and colocation services to fiber optic connectivity solutions, and custom enterprise IT development and management.

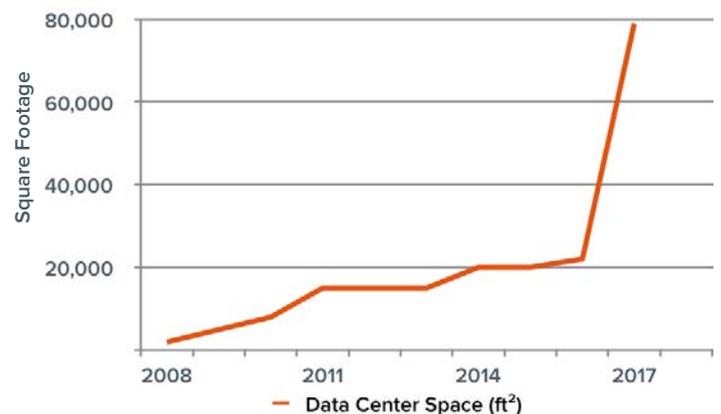

Our data center square footage has increased from just 2,200 ft² (200 m²) with two facilities to almost 80,000 ft² (7,400 m²) across eight facilities in less than ten years.

Colocation Northwest provides data center and connectivity solutions to a wide range of elite technology based organizations requiring high-density and high-performance computing scalability. In addition to servicing over 12,000 customers on the west coast with a wide range of internet and telecommunication services, we serve over 250 business colocation data center customers across our Pacific Northwest data center campuses. Our data center customers consist of prominent Fortune 100 international corporations, enterprise media and content providers, multi-national tier 1 and 2 telecom providers, several municipal and seaport organizations, business-critical internet security solution providers, pacific island telecommunication providers, and some of the most popular entertainment gaming platforms in the world.

Our Pacific Northwest campus of data center facilities have grown significantly over the last several years paralleling our positive revenue and overall expansion as a major colocation provider in the region. Colocation Northwest has diversified our data center facility footprint from two area facilities to over eight in less than ten years. Our available square footage has increased from just 2,200 ft² (200 m²) to almost 80,000 ft² (7,400 m²) in the same span of time, making Colocation Northwest one of the fastest growing private operators on the West Coast.

AN ISOFUSION COMPANY

Our customers are expanding their reach into the growing world market and require the best connectivity options to expand their services into Asia-Pacific and European markets. As the largest independent data center tenant in the Westin Building Exchange (WBX) facility, Colocation Northwest has direct access to every major carrier in the region, in addition to interconnection points with other networks via the Seattle Internet Exchange (SIX), and our own expansive network across the west coast.

Our Pacific Northwest data centers are strategically positioned across the region. Supported by a redundant network backbone and expansive west coast presence we provide low-latency and maximum availability to customers and partners. As one of the largest colocation providers in the WBX facility, our enterprise data center facilities offer diverse fiber connectivity to key western interconnection facilities like the Pittock Internet Exchange in downtown Portland, One Wilshire in Los Angeles, and the entire San Francisco bay area. We also have access to regional NAPs and TransPacific landing stations allowing for high performance connectivity to international service providers, carriers, and cloud providers.

Colocation Northwest is the ideal partner for the complex data center needs of today's enterprise business, offering the best colocation and data center management solutions available today. We have been a trusted partner for data center solutions to some of the largest technology companies in the world offering valued and integral partner support for over 25 years.

Colocation Northwest offers state of the art data center infrastructure and managed support solutions for comprehensive, reliable continuity, scalability, and growth. Let us develop a colocation solution that meets your organization's needs that will scale as your business and technology builds the future.
