

Just off of State Route 520, the Redmond data center offers 2,500 square feet of multi-tenant space with fully enclosed and locking 42U height cabinets and private suite availability. Because of its location close to important game development, technology and telecommunications headquarters, many tenants use this location to host IT close to their partners. It is located only one-mile from Microsoft's corporate headquarters.

This site combines excellent data center quality and fast connectivity, as found in every Colocation Northwest data center. Use the convenience of an Eastside location to eliminate travel time or paying an unnecessary premium for colocation in downtown Seattle.

- ⦿ Eastside King County Location Near Game, Tech and Telecommunications Campuses
- ⦿ Dark Fiber to Pacific Northwest Carrier Hotel
- ⦿ In-Row Chilled Water Cooling
- ⦿ Multiple Tier 1 and 2 Carriers
- ⦿ Low Latency U.S. and International Connectivity
- ⦿ Blended Internet Backbone
- ⦿ Computer Controlled Security

The Redmond data center is part of our regional network of Colocation Northwest data center facilities linked to South Hill Seattle and Tacoma data centers by way of Downtown Seattle via redundant and dark and lit fiber and is connected to Downtown Seattle and Bellevue data centers through a redundant fiber ring. Should a carrier go down or if a break occurs in the fiber path, your connectivity will remain intact. Colocation customers can take advantage of direct carrier and online entity interconnection inside the Westin without secondary sites in carrier facilities. Colocation Northwest is an Internet service provider. Your blended Internet backbone will feature multiple Tier 1 and Tier 2 carriers.

Colocation Northwest is an Internet service provider. Your blended Internet backbone will feature multiple Tier 1 and Tier 2 carriers.

With points of presence in the Bay Area, Los Angeles, and Las Vegas, the Colocation Northwest network includes three carrier hotels and other points of presence to west coast cable landing stations. In partnership with PCCW Global and Zenlayer, we offer unique solutions for remote colocation, low latency international connectivity, global WAN and points of presence, as well as, hybrid and multi- cloud.

Colocation Northwest offers comprehensive consulting and support services. Call us for help with any or all of the following: planning, procurement, deployment and configuration, or managed IT services such as monitoring, maintenance, upgrades and repairs. To complete your network, Colocation Northwest can provide internet service and connectivity to any location, even where other providers cannot.
